

Test Kitchen Bake Trials — SD-12

Test Kitchen · 2025-03 · Issue 1

1. Trials

Six trial bakes of the SD-12 loaf were run in oven 3 in March 2025. Each trial baked twelve loaves and recorded the core temperature of every loaf on leaving the oven.

Trial	Steam	Lowest core reading	Loaves gummy at the centre
1	None	88	5 of 12
2	None	90	4 of 12
3	None	87	6 of 12
4	First 10 minutes	96	0 of 12
5	First 10 minutes	97	0 of 12
6	First 10 minutes	96	0 of 12

Core readings are in degrees Celsius.

2. Observations

In trials 1 to 3 the crust set within the first few minutes and the loaves stopped rising early. Loaves with a core reading under 94 were gummy at the centre when cut.

In trials 4 to 6 the crust stayed soft for longer and the loaves rose fully. Every loaf read 96 or above at the core and none was gummy.

The oven setting was the same in all six trials.

3. Records

Trial bake sheets are kept by the Test Kitchen for two years.
