

Engineering Change Request CR-88 — Seal Material Revision

Engineering Change Board · 2024-09 · Issue 1

1. Change description

This change request records a revision to the seal material specified for the valve assembly identified in section 2. The elastomer grade previously carried against the seal line item is withdrawn and replaced with FKM-70.

The revision was raised by the Engineering Change Board following a review of the sealing performance requirement at the housing interface. The replacement grade offers improved thermal and chemical resistance across the declared operating range, and is qualified for continuous service at the interface temperatures recorded in the assembly specification.

Field	Entry
Change request	CR-88
Raised	2024-09-11
Category	Material change
Originating function	Engineering Change Board
Status	Implemented

The replacement grade is to be reflected in the next issue of the bill of materials for the affected series. No change is made to the seal geometry, the housing interface dimensions, or the fastener specification. Tooling is unaffected.

Downstream qualification activity arising from this change is managed separately and is not recorded here.

2. Affected assemblies

This change applies to the following assembly only.

Assembly	Line item	Disposition
BV-12	Seal, housing interface	Material grade revised to FKM-70

No other assembly in the series is affected by this change request. Assemblies sharing the housing interface geometry were reviewed and excluded, as the seal line item is specified separately against each assembly and the revision does not propagate.

Stock of the withdrawn grade held against BV-12 is to be depleted before the replacement grade is drawn. Existing finished assemblies are unaffected and no retrospective action is required against units already built.

3. Procedure reference

This change request was raised and processed under the Material Change Approval Procedure, revision 3, which governs the classification of changes affecting material specification and sets out the record to be retained against each class.

Reference	Entry
Governing procedure	Material Change Approval Procedure
Procedure revision	Revision 3
Procedure section applied	2. Change classes
Classification	Class A
Record retained	This change request

The authority under which a change of this classification is approved is determined by the governing procedure and the delegation of authority in force on the date this request was raised. It is not reproduced here.

Records supporting the classification are held by the Quality Management System function.
