

Engineering Change Request CR-91 — Housing Fastener Tightening Procedure

Engineering Change Board · 2025-06 · Issue 1

1. Change description

This change request records a revision to the tightening procedure specified at the housing interface of the assembly identified in section 2.

The procedure is amended to require a defined tightening sequence and a recheck at a stated interval after initial tightening. The specified torque value is unchanged by this request.

Field	Entry
Change request	CR-91
Raised	2025-06-17
Category	Process change
Originating function	Engineering Change Board
Status	Implemented

No change is made to the fastener specification, the fastener finish, the housing interface dimensions or the seal specification. Tooling is unaffected. The calibration interval for the torque wrench is unchanged.

2. Affected documents

This change applies to the following controlled documents.

Document	Action
WI-BV12	Reissue at Revision D
WI-BV12 Revision C	Withdraw and supersede

Withdrawal of the superseded revision is to be completed at all workstations before the reissued revision is worked to. Manufacturing Engineering is to confirm withdrawal against each workstation.

No other assembly in the series is affected by this request. Assemblies carrying a different fastener dimension are specified under their own instruction and are outside the scope of this change.

3. Procedure reference

This change request was raised and processed under the Material Change Approval Procedure, revision 3.

Reference	Entry
Governing procedure	Material Change Approval Procedure
Procedure revision	Revision 3
Record retained	This change request

The classification applied to this change, and the authority under which a change of that classification is approved, are determined by the governing procedure and the delegation of authority in force on the date this request was raised. Neither is reproduced here.
