

Field Return Summary — Second Half 2024

Field Service · 2024-12 · Issue 1

1. Return volumes

This summary records units returned from the field in the second half of 2024, by month and by receiving route. Volumes are stated as units received and booked in; units in transit at the period end are carried into the following period.

Month	Units returned	Booked in
July	41	41
August	38	38
September	52	50
October	61	61
November	58	57
December	44	40

Return volumes across the period are within the range recorded for the preceding period. No return was refused on receipt.

2. Findings by symptom

Each returned unit is assessed on receipt and a symptom recorded against it. Symptoms are recorded as observed, without assessment of origin. Where more than one symptom is present, each is recorded.

Symptom	Units	Share
Fasteners found backing off at the housing interface	96	31%
Seepage at the seal interface	74	24%
External damage in handling	58	19%
Incorrect configuration supplied	41	13%
No fault found on assessment	40	13%

Fasteners found backing off at the housing interface is the most frequently recorded symptom for the period. In each case the fastener remained engaged and no fastener was recovered detached.

Measured residual torque on units recording this symptom fell below the specified value in every case assessed. The measured spread is recorded in the assessment sheets held with the individual return records.

Residual torque on assessment	Units
Within specified value	0
Below specified value, within 20%	34
Below specified value, beyond 20%	62

Units recording seepage at the seal interface were assessed separately and are reported under the certification correspondence for that characteristic.

3. Parts disposition

Returned units are dispositioned on completion of assessment.

Disposition	Units
Rework and return to stock	187
Scrap	63
Return to customer, no fault found	40
Held pending assessment	19

Units held pending assessment at the period end are carried forward. The disposition record for each unit is held with the individual return record.
