

Manufacturing Site Register

Manufacturing Operations · 2025-09 · Revision 4

1. Sites and codes

This register lists the manufacturing sites operated by the group, the site code used in internal documentation, and the function each site performs. The register is maintained by Manufacturing Operations and is reissued when a site is opened, closed, or reassigned.

Site code	Site	Function
Plant X	Bamberg	Assembly and test
Plant Y	Kassel	Machining and sub-assembly
Plant Z	Ingolstadt	Assembly, test and rework

Site codes are used throughout internal documentation in preference to location names. Where a document refers to a site by location only, the code in this table governs.

No other manufacturing sites are operated by the group. Warehousing and distribution locations are not manufacturing sites and are listed in the logistics register, which is maintained separately.

2. Plant X (Bamberg)

Plant X performs final assembly and test. The site operates two assembly lines and a test cell, and holds approval for the assembly families listed in its scope of work.

Attribute	Entry
Site code	Plant X
Location	Bamberg
Function	Assembly and test
Lines	2 assembly, 1 test cell
Scope	Valve and sealing assemblies

Incoming material at Plant X is received against the approved supplier list for the site, recorded in section 4. Material from a supplier not on that list may not be drawn to the line without a concession raised by Quality.

The site operates its own incoming inspection function. Nonconformities raised at incoming inspection are recorded against the site and reported monthly. Rework performed at Plant X is recorded under the site code in the monthly rework return.

3. Other sites

Plant Y at Kassel performs machining and sub-assembly and does not carry out final assembly. Output from Plant Y is transferred to Plant X or Plant Z for assembly.

Plant Z at Ingolstadt performs assembly and test and additionally operates the group rework cell. Rework returned from the field or from other sites is routed to Plant Z, which is reflected in the site's monthly rework figures.

Site	Lines	Rework cell	Incoming inspection
Plant Y (Kassel)	3 machining	No	Yes
Plant Z (Ingolstadt)	2 assembly	Yes, group	Yes

Transfers between sites are recorded on the internal movement note and do not constitute a supply event for the purposes of the approved supplier list.

4. Approved supplier lists by site

Each site draws material only from the suppliers approved for that site. A supplier approved at one site is not thereby approved at another; approval is granted per site following audit.

Approved sources are recorded here by supplier code. Codes resolve to companies in the supplier register maintained by Procurement; this register does not reproduce company names, which change on reorganisation while the code does not.

Site	Approved source codes
Plant X (Bamberg)	SUP-0311, SUP-0407
Plant Y (Kassel)	SUP-0142, SUP-0407
Plant Z (Ingolstadt)	SUP-0142, SUP-0311

A code appearing against one site does not imply approval at another. Approval is granted per site following audit, and a supplier approved at one site has not thereby been audited against another site's scope of work.

Changes to an approved source list require a completed site audit and are recorded in the supplier register.
