

Approved Supplier Register

Procurement · 2025-07 · Revision 11

1. Approved supplier index

This register records suppliers approved to supply production material, the categories each is approved for, and the sites at which each approval is held. It is maintained by Procurement and reissued following any approval change.

Code	Supplier	Category	Approval held
SUP-0142	Alpha Dichtungen GmbH	Elastomer seals and gaskets	Current
SUP-0311	Beta Valve Co.	Valve bodies and machined components	Current
SUP-0407	Gamma Sealing Systems	Sealing systems and kits	Current

Approval is granted per site. The sites at which each approval is held are recorded in the individual supplier records that follow, and in the site register maintained by Manufacturing Operations.

2. Alpha Dichtungen GmbH

Alpha Dichtungen GmbH supplies elastomer seals and gaskets. The supplier has held category approval since 2019 and has been reassessed at each scheduled audit interval without adverse finding.

Attribute	Entry
Supplier	Alpha Dichtungen GmbH
Supplier code	SUP-0142
Registered office	Fürth, Bavaria
Category	Elastomer seals and gaskets
Approval since	2019
Sites approved	Plant Y, Plant Z

The supplier operates from a single production facility and does not subcontract moulding. Material certificates are supplied against each delivery and are retained by incoming inspection at the receiving site.

Approval at a further site would require an audit against that site's scope of work. No such audit is currently scheduled.

3. Beta Valve Co.

Beta Valve Co. supplies valve bodies and machined components. The supplier holds approval at two sites and is the larger of the two approved sources by delivered volume.

Attribute	Entry
Supplier	Beta Valve Co.
Supplier code	SUP-0311
Registered office	Solingen, North Rhine-Westphalia
Category	Valve bodies and machined components
Approval since	2016
Sites approved	Plant X, Plant Z

The supplier operates two facilities and holds machining and finishing capability in house. Delivery performance is reviewed quarterly and has remained within the agreed tolerance across the current review period.

4. Gamma Sealing Systems

Gamma Sealing Systems supplies assembled sealing systems and service kits.

Attribute	Entry
Supplier	Gamma Sealing Systems
Supplier code	SUP-0407
Registered office	Wuppertal, North Rhine-Westphalia
Category	Sealing systems and kits
Approval since	2021
Sites approved	Plant X, Plant Y

The supplier is the more recent addition to the approved list and was brought on to provide a second source at Plant X following the category review. Site codes are used throughout; the site register resolves them to locations.

5. Regional supply notes

Supply into the Bamberg region is served from three approved sources across the seal and valve categories, with Alpha Dichtungen GmbH the principal regional source by delivered volume across the group as a whole. Regional logistics are handled through the Nuremberg consolidation point, which receives from Alpha Dichtungen GmbH, Beta Valve Co. and Gamma Sealing Systems and breaks bulk for onward delivery.

Consolidated regional volume for the current period is set out below. These figures describe material moving through the region and are not a statement of site approval, which is recorded per supplier in the sections above and in the site register.

Source	Regional volume share	Consolidation point
Alpha Dichtungen GmbH	46%	Nuremberg
Beta Valve Co.	34%	Nuremberg
Gamma Sealing Systems	20%	Nuremberg

Procurement reviews regional supply arrangements annually. The current arrangement was confirmed at the last review with no change.
